Milestone - 2 Report

Introduction:
This milestone includes using embedding models with transformer architectures like sBERT and Bart-MNLI (Natural Language Inference) used for zero-shot classification using cosine similarity on context-aware embeddings of given dataset

Performance:

Model	Validation Performance	Prediction performance
Baseline (sample_submission.csv)	-	0.3525
TF-IDF	0.29617	0.32294
Word2vec	0.34792	0.30423
sBERT	0.42308	0.38653
BART-MNLI	0.56583	0.49985

Conclusion:
We see the first models that are better than baseline submission, there was no fine tuning or training as milestone-2 required zero-shot classification using the pre-trained embedding models.
